

GB00BNDQ7P95

Monthly Factsheet - 30/09/2024

## INVESTMENT OBJECTIVE

A Europe ex-UK equity strategy seeking to achieve capital growth over a minimum of five years. The Fund follows a selective bottom-up investment process to find quality companies, businesses with attractive long-term prospects that can grow under their own steam, irrespective of the macroeconomic environment.

Fund management analysis can be found on P.3

## PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

## FUND MANAGEMENT ANALYSIS

### MARKET ENVIRONMENT

- September was an eventful month for investors. The Federal Reserve began the cycle of interest rate cuts with a 50bp cut.
- The less optimistic tone of the Japanese authorities and the new stimulus measures in China helped to ease investors' concerns and support a sharp rise in equities until the end of the month.
- In Europe, the situation remains concerning as inflation eases and economic data continues to show weakness, with indicators like PMIs and IFO remaining low and no sign of optimism across the corporate sector.

### PERFORMANCE COMMENTARY

- During the month of September, the Fund recorded a negative absolute performance, although above its reference indicator.
- Our holding in Biontech that we initiated last month has been the best performer in the fund after papers published in advance of the cancer congress ESMO showed promising product responses.
- Our biggest detractors this month has been Novo Nordisk, as supply restrictions are now being incorporated into analyst estimates for Q3, leading to increased uncertainty regarding the medium-term investment outlook.
- Having no exposure to Communication Services penalised the Fund while, on the contrary, having no exposure to Energy has been very supportive.

### OUTLOOK AND INVESTMENT STRATEGY

- During the month, our portfolio remained relatively stable with only a few adjustments. We initiated a new position in Ferrari that now accounts to 0.8% of the portfolio.
- We reduced our holdings in the Healthcare stocks and particularly continued to reduce Lonza and Novo Nordisk after a weak month.
- Additionally, we made modest reductions in order to take profit in our consumer names, such as L'Oreal, Beiersdorf and Essilor as well as Luxury good stocks like Hermes after strong performance following positive news from China in the last week of September.
- The Fund continues to rely on bottom-up fundamental analysis with a medium-long term horizon.
- As rate cuts have started in Europe and the economies weaken, we are encouraged that markets should be able to ride out a period of weaker economic strength and some political headlines.
- We stick to our process of focusing on profitable companies with high returns on capital, reinvesting for growth and maintain our focus on stocks and sectors with strong visibility on sales and profits.

### ESG SCORE

FP Carmignac European Leaders B GBP Inc	AA
Reference Indicator*	AA

Source: MSCI ESG

### MSCI ESG SCORE PORTFOLIO VS REFERENCE INDICATOR (%)

Source: MSCI ESG Score. ESG Leaders represent companies rated AAA and AA by MSCI. ESG Average represent companies rated A, BBB, and BB by MSCI. ESG Laggards represent companies rated B and CCC by MSCI. Portfolio ESG Coverage: 98.5%

### CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES) converted to Euro

Source: MSCI, 30/09/2024. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

**Carbon emissions figures** are based on MSCI data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO<sub>2</sub> is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

Please refer to the glossary for more information on the calculation methodology

## GLOSSARY

**Active Management:** An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

**Active share:** Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

**Active Weight:** Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

**Alpha:** Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

**Beta:** Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

**Bottom up investing:** Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

**Capitalisation:** A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

**Duration:** A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

**FCP:** Fonds commun de placement (French common fund).

**Investment grade:** A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

**Investment/net exposure rate:** The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

**Modified duration:** A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

**Net asset value:** Price of all units (in an FCP) or shares (in a SICAV).

**Rating:** The rating measures the creditworthiness of a borrower (bond issuer).

**Sharpe ratio:** The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

**VaR:** Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

**Volatility:** Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

## ESG DEFINITIONS & METHODOLOGY

**ESG:** E for Environment, S for Social, G for Governance

**ESG score Calculation:** Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

**MSCI methodology:** MSCI uses company disclosed emissions where available. In the instance these are not available, they use their proprietary model to estimate emissions. The model has three distinct modules, production model (used for power-generating utilities), company-specific intensity model (used for companies that have reported carbon emissions data in the past but not for all years), & industry segment-specific intensity model (used for companies that have not reported any carbon emissions data in the past). For further information, please visit MSCI's latest "Climate Change Metrics Methodology" document.

**Scope 1:** Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

**Scope 2:** Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

**Scope 3:** Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

## MAIN RISKS OF THE FUND

**EQUITY:** The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

**CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **DISCRETIONARY MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

**The Fund presents a risk of loss of capital.**
